

Data Protection report 2023

Data Protection Officers

Mistale Taylor has been a Volt DPO since 2020. Mateusz Kupiec and Max Brito joined the DPO team in early 2023.

At the end of the year, the DPOs successfully recruited Ariena Lala and Torsten Armbrrecht, experts in data protection law and technology, to the DPO team. Their expertise enhances Volt's data protection efforts.

They can be contacted at dpo@volteuropa.org.

Accountability

As requested, the DPOs advised national chapters on questions related to data protection.

Data subject rights

As in previous years, the DPOs received multiple subject access requests from individuals. The DPOs coordinated the requested actions (such as information, correction or deletion) in close cooperation with the General Secretary Office and the Tech Team.

Revised privacy policy

The DPOs have been collaborating to revise and update Volt Europa's privacy policy to align it with the latest legal requirements and organisational practices.

Software compliance

The DPOs played a key role in evaluating and implementing new software systems to ensure that they adhere to data protection compliance standards.

Future outlook

Volt Europa's Data Protection Library on Google Drive continues to be a comprehensive collection of essential documents related to data protection. Regular updates, ongoing monitoring and proactive advice remain crucial to maintaining the organisation's compliance with data protection regulations.

December 2023
